Stone Pillar Pillar Technologies Releases Version 4.5 of Stone Pillar Suite

New release adds powerful bench test automation capabilities including support for automated ESD testing

SANTA CLARA, California, March 19, 2013 – Stone Pillar Technologies, Inc. today introduced the latest enhancements to their Stone Pillar Suite, a software tool suite supporting parametric test chip layout automation, parametric test automation and data analysis.

The latest release of Stone Pillar's tool suite adds to the BenchTestManager tool capabilities and provides capabilities for interactive, automated, or fully adaptive test capabilities for bench test setups including support for ESD test automation. Other enhancements add to the existing capabilities for parametric test chip layout and test automation to further increase the efficiency of these tasks.

Software tools within Stone Pillar Suite automate the complex tasks involved in creating parametric test chips, testing the devices, and managing and analyzing the resulting data. Stone Pillar tools help technology developers and process integration teams increase efficiency and provide valuable insight into technology issues from early-stage development through yield improvement.

Stone Pillar's TestPlanManager and BenchTestManager streamline test automation by connecting test equipment with details of device locations and parameters, turning testing into a simple drag and drop operation.

Licenses for Stone Pillar Suite are available as either term or perpetual licenses.

About Stone Pillar

Stone Pillar Technologies, Inc. is the leading provider of tools for parametric test automation for semiconductor process technology development. Products within Stone Pillar Suite automate and optimize tasks such as parametric test chip development, test plan creation, and data analysis.

Stone Pillar software is in use by leading semiconductor vendors and at leading research institutions worldwide.
